

**Operating Equipment for U. S. Army Observation
Balloons: Tension Meters, Maneuvering Blocks,
Maneuvering Spiders, Danger Cones and Clamps, Valve
Testing Device, Sand Bags; Prepared in the Office of the
Chief of Air Service,**

Filesize: 8.05 MB

Reviews

It becomes an amazing pdf that I actually have ever go through. This is for those who statte that there had not been a worth reading through. You will like how the author create this pdf.

(Prof. Lonie Roob)

OPERATING EQUIPMENT FOR U. S. ARMY OBSERVATION BALLOONS: TENSION METERS, MANEUVERING BLOCKS, MANEUVERING SPIDERS, DANGER CONES AND CLAMPS, VALVE TESTING DEVICE, SAND BAGS; PREPARED IN THE OFFICE OF THE CHIEF OF AIR SERVICE,

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from **Operating Equipment for U. S. Army Observation Balloons: Tension Meters, Maneuvering Blocks, Maneuvering Spiders, Danger Cones and Clamps, Valve Testing Device, Sand Bags; Prepared in the Office of the Chief of Air Service**, November, 1920 In order to safeguard the observation balloon from damage due to high winds and also to protect the cable from excessive strains it is necessary to frequently measure the tension to which the cable is subjected. There are two ways of obtaining this tension. First, the tension indicating device is built directly into the winch and is so arranged that the load on the cable is constantly indicated. If it is desirable, a registering device can be used, and thereby a graphic record of the tension throughout the flight is obtained for future use. However, this latter feature has not been deemed necessary in the United States Army Air Service. Second, a portable tension meter is also in use. This weighs between 6 and 7 pounds; is temporarily applied to the cable close to the winch; a reading is taken and noted. The general principles of the tension meters are shown in figure 1. The cable is made to pass under three rollers, R, R , and R . The roller R is placed midway between the two rollers R and R , so as to deflect the cable. This places a resultant pressure (W) against the roller R in the direction shown by the arrow. In the spring-type tension meter this pressure on roller R is resisted by means of a coil spring (see Plate I, fig. 2). The greater the tension on the coil the more this spring...
