The present work covers the elements of plane and solid geometry as offered in the best American high schools. It does not contain any discussion of conics, nor does it introduce the distinctive features of modern geometry. It does seek, however, to invest the ancient geometry with something of the spirit of modern mathematics. 2. The sequence of propositions in Books I to III is in the main that laid down by the Association for the Improvement of Geometrical Teaching, of England. The algebraic treatment of proportion is not concealed. The one-to-one correspondence between geometry and algebra which Professor Newcomb has termed the Law of Homology, is easily and naturally introduced in Book II. This law is distinctly postulated as the foundation of the treatment of proportion, and the student is informed that the purely geometric method is too difficult for the beginner. After proportion the sequence has been determined by the comparison of leading foreign and American text-books. It has been assumed that the student who has entered into...
